Presentation Outline

- Analysis of Clocked Sequential circuits
  - State and Output Equations
  - State Table
  - State Diagram

Analysis of Clocked Sequential Circuits

Analysis is describing what a given circuit will do

The output of a clocked sequential circuit is determined by

1. Inputs
2. State of the Flip-Flops

Analysis Procedure:

1. Obtain the equations at the inputs of the Flip-Flops
2. Obtain the output equations
3. Fill the state table for all possible input and state values
4. Draw the state diagram

Analysis Example

- Is this a clocked sequential circuit?

  YES!

- What type of Memory?

  D Flip-Flops

- How many state variables?

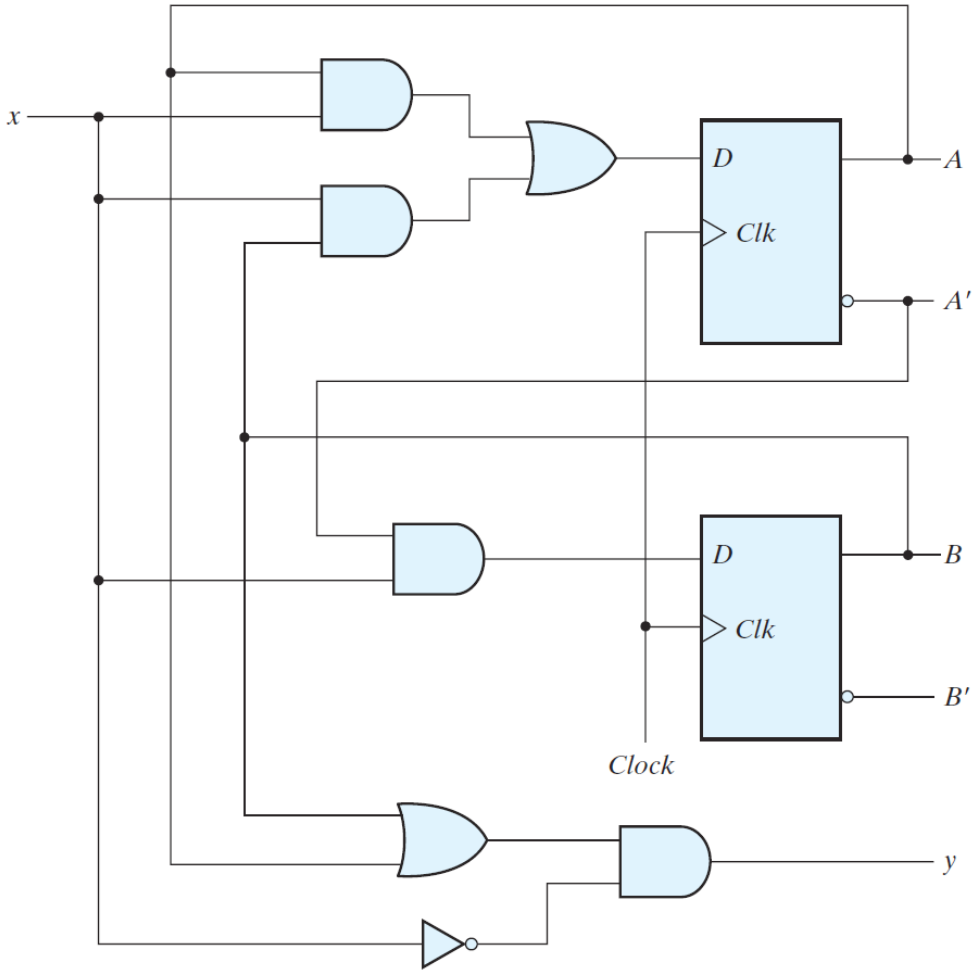
  Two state variables: A and B

- What are the Inputs?

  One Input: x

- What are the Outputs?

  One Output: y



Flip-Flop Input Equations

- What are the equations on the D inputs of the flip-flops?

$$D_A = A\,x + B\,x$$

$$D_B = A'\,x$$

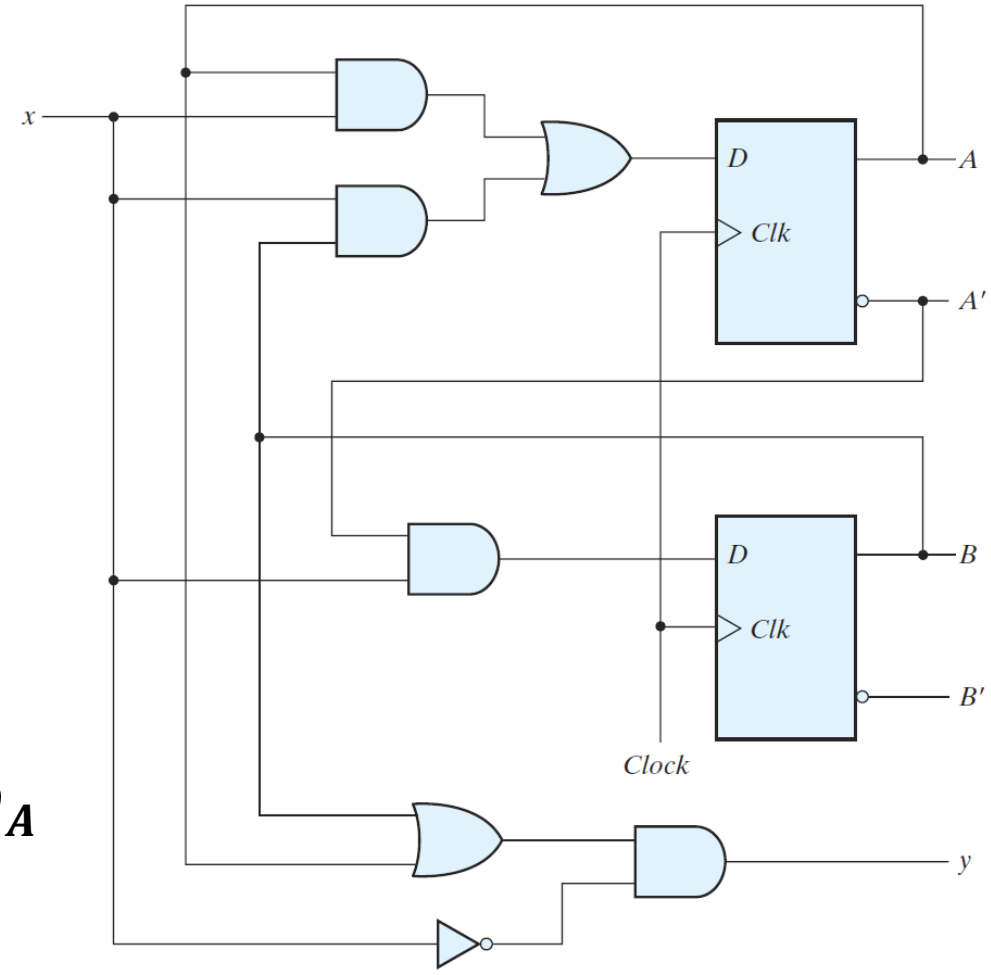
- A and B are the **current state**

$$A(t) = A, \quad B(t) = B$$

- D_A and D_B are the **next state**

$$A(t+1) = D_A, \quad B(t+1) = D_B$$

- The values of A and B will be D_A and D_B at the next clock edge



Next State and Output Equations

- The next state equations define the **next state**

  At the **inputs** of the Flip-Flops

- Next state equations?

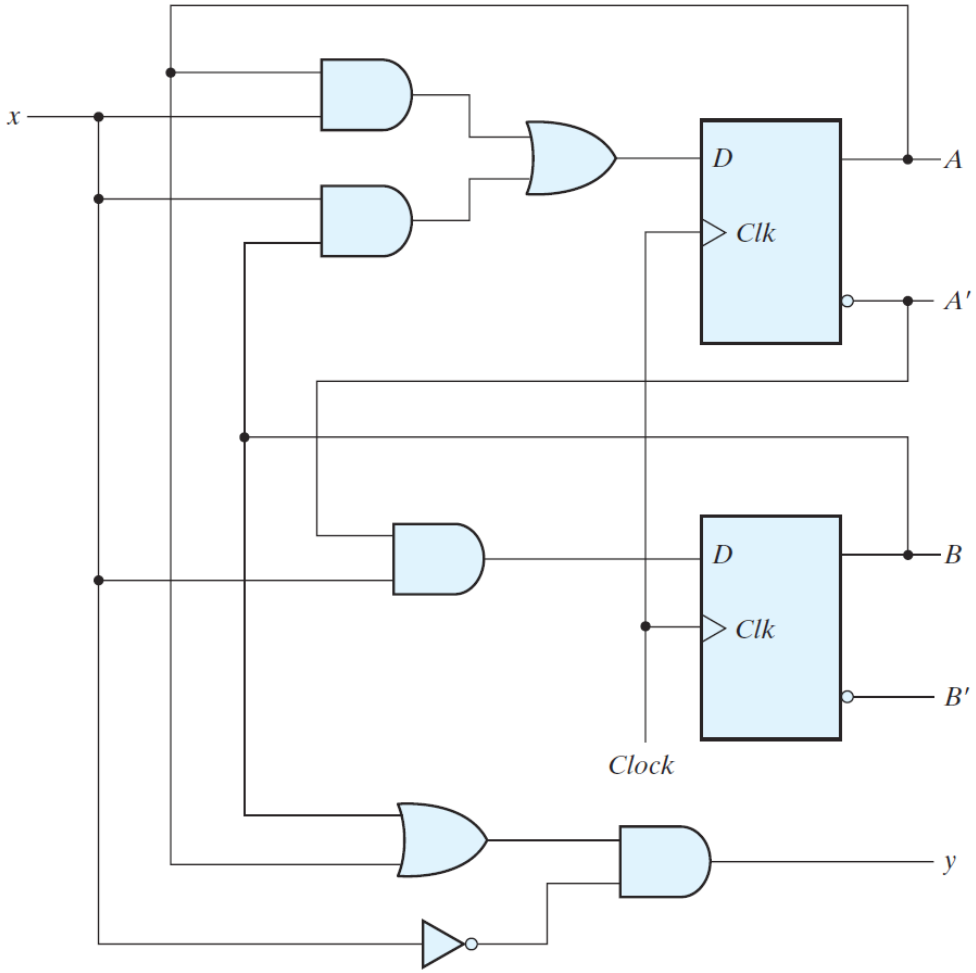
  $$A(t+1) = D_A = A\,x + B\,x$$

  $$B(t+1) = D_B = A'\,x$$

- There is only one output y

- What is the output equation?

  $$y = (A + B)\,x'$$



State Table

- State table shows the Next State and Output in a tabular form
- Next State Equations: $A(t+1) = A\,x + B\,x$ and $B(t+1) = A'\,x$
- Output Equation: $y = (A + B)\,x'$

Present State		Input	Next State		Output
A	B	x	A	B	y
0	0	0	0	0	0
0	0	1	0	1	0
0	1	0	0	0	1
0	1	1	1	1	0
1	0	0	0	0	1
1	0	1	1	0	0
1	1	0	0	0	1
1	1	1	1	0	0

Another form of the state table

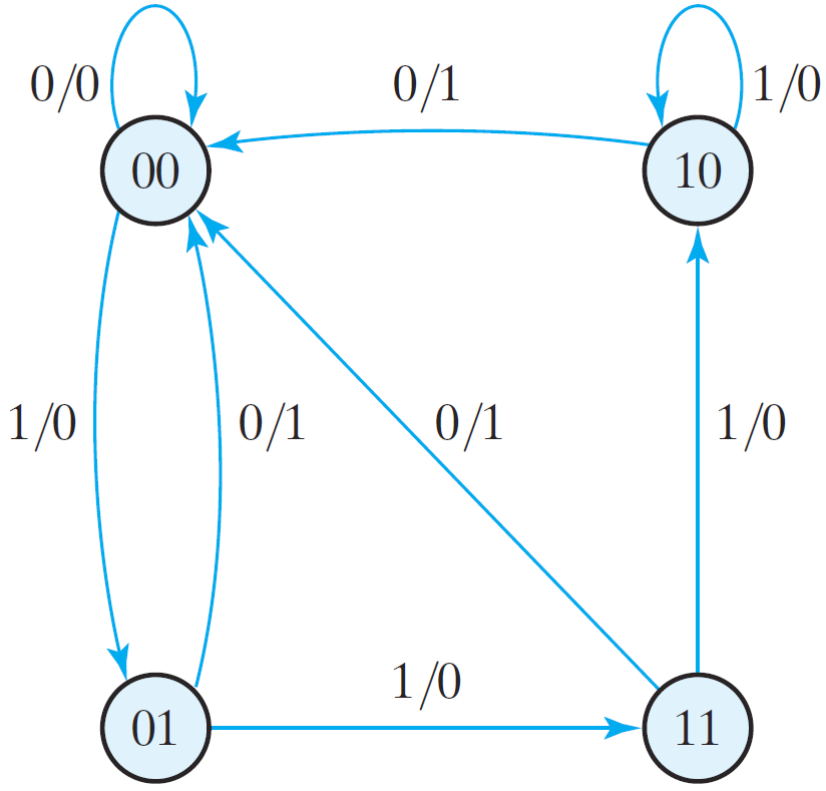
Present State		Next State				Output	
		x = 0		x = 1		x = 0	x = 1
A	B	A	B	A	B	y	y
0	0	0	0	0	1	0	0
0	1	0	0	1	1	1	0
1	0	0	0	1	0	1	0
1	1	0	0	1	0	1	0

State Diagram

- State diagram is a graphical representation of a state table
- The circles are the states
- Two state variable ➔ Four states (ALL values of A and B)
- Arcs are the state transitions

  Labeled with: Input x / Output y

Present State		Next State				Output	
		$x = 0$		$x = 1$		$x = 0$	$x = 1$
A	B	A	B	A	B	y	y
0	0	0	0	0	1	0	0
0	1	0	0	1	1	1	0
1	0	0	0	1	0	1	0
1	1	0	0	1	0	1	0



Combinational versus Sequential Analysis

Analysis of Combinational Circuits

- Obtain the Boolean Equations
- Fill the Truth Table

Output is a function of input only

Analysis of Sequential Circuits

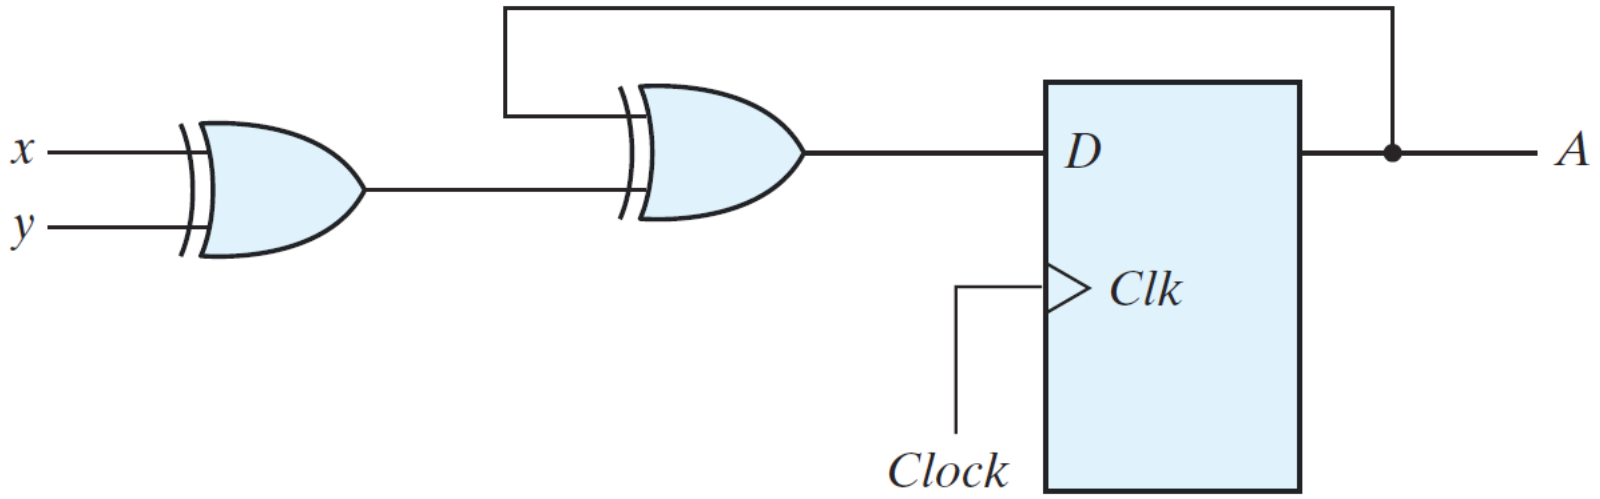
- Obtain the Next State Equations
- Obtain the Output Equations
- Fill the State Table
- Draw the State Diagram

Next state is a function of input and current state

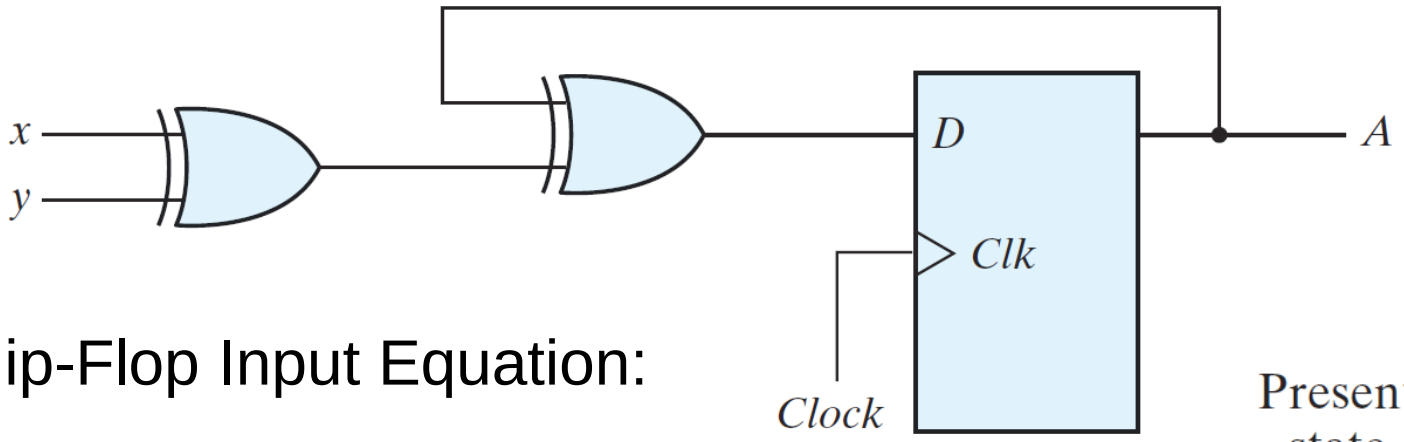
Output is a function of input and current state

Example with Output = Current State

- Analyze the sequential circuit shown below
- Two inputs: x and y
- One state variable A
- No separate output ➔ Output = current state A
- Obtain the next state equation, state table, and state diagram



Example with Output = Current State



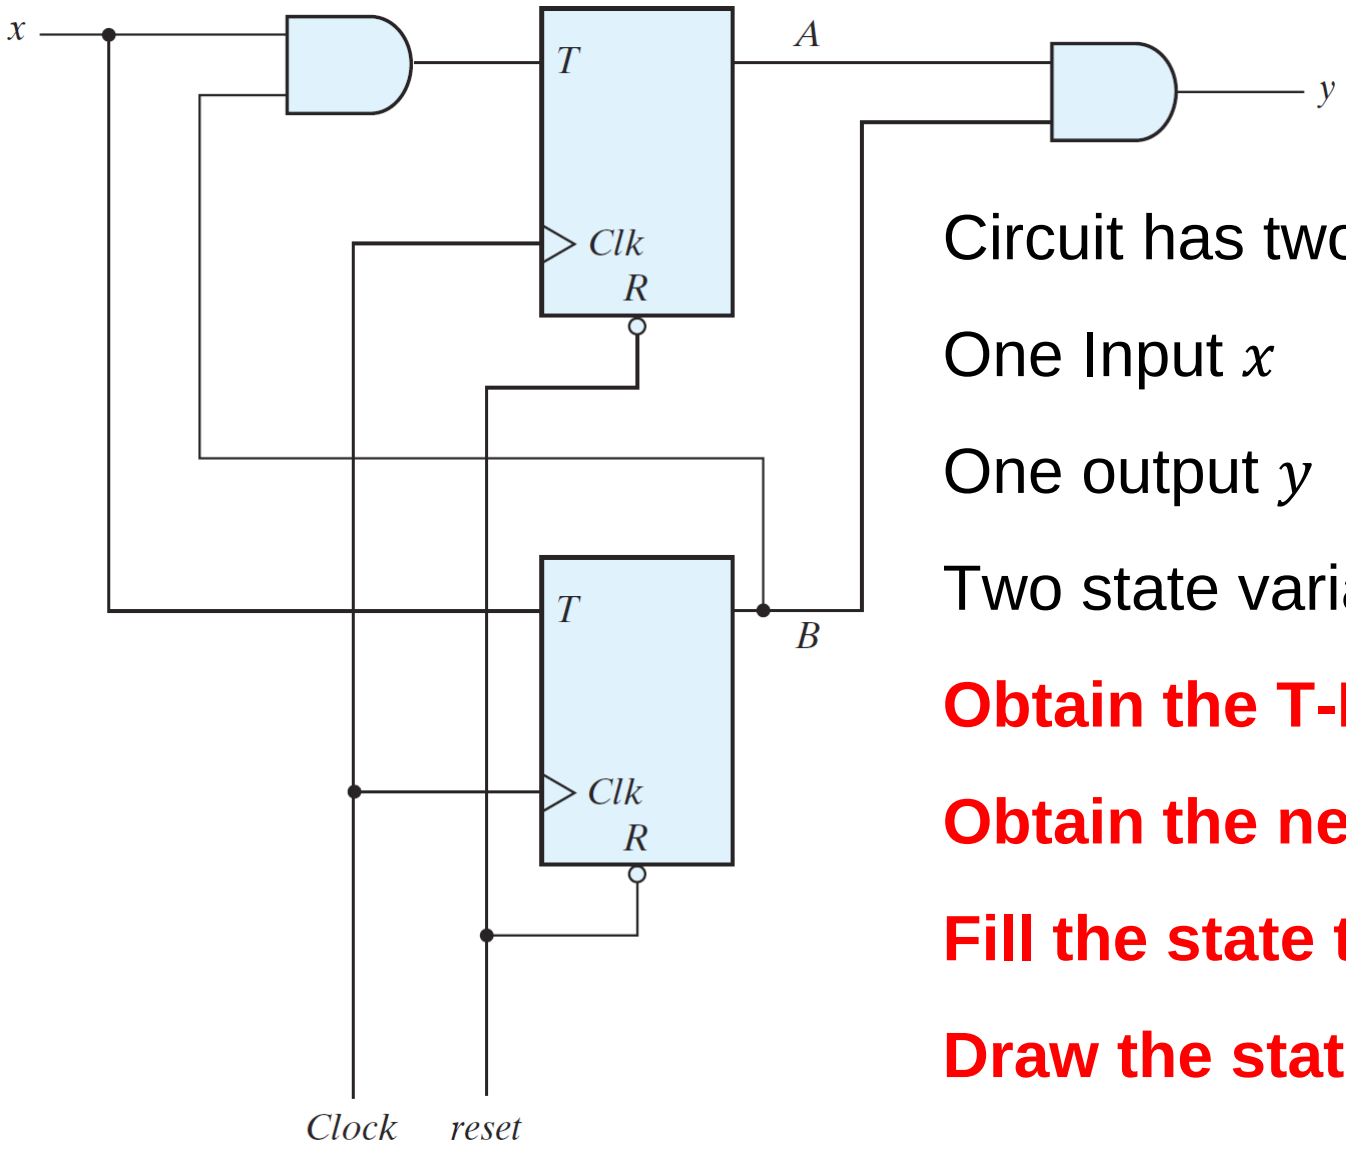
- Flip-Flop Input Equation:

$$D_A = A \oplus x \oplus y$$

- Next State Equation: $A(t+1) = A \oplus x \oplus y$

Present state	Inputs		Next state
A	x	y	A
0	0	0	0
0	0	1	1
0	1	0	1
0	1	1	0
1	0	0	1
1	0	1	0
1	1	0	0
1	1	1	1

Sequential Circuit with T Flip-Flops



Circuit has two T Flip-Flops

One Input x

One output y

Two state variables: A and B

Obtain the T-FF input equations

Obtain the next state equations

Fill the state table

Draw the state diagram

Recall: Flip-Flop Characteristic Equation

- For D Flip-Flop: $Q(t+1) = D$
- For T Flip-Flop: $Q(t+1) = T \oplus Q(t)$
- For JK Flip-Flop: $Q(t+1) = J\,Q'(t) + K'\,Q(t)$

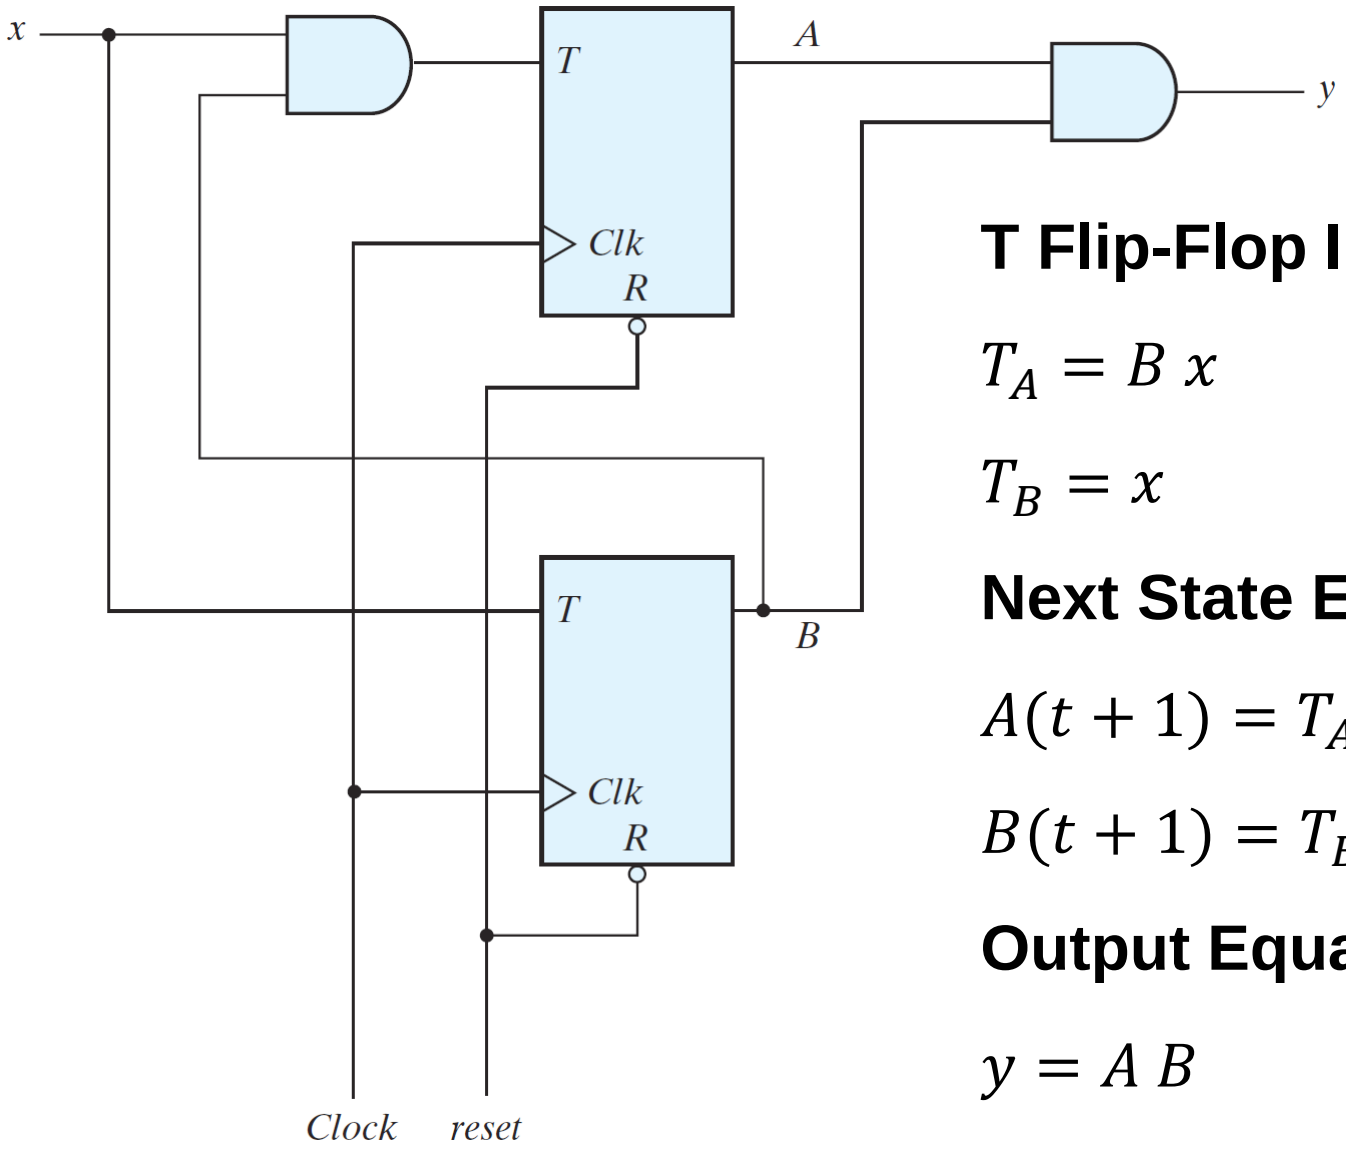
These equations define the Next State

D Flip-Flop	
D	$Q(t+1)$
0	0 Reset
1	1 Set

T Flip-Flop	
T	$Q(t+1)$
0	Q(t) No change
1	Q'(t) Complement

JK Flip-Flop	
J K	$Q(t+1)$
0 0	Q(t) No change
0 1	0 Reset
1 0	1 Set
1 1	Q'(t) Complement

Sequential Circuit with T Flip-Flops



T Flip-Flop Input Equations:

$$T_A = B\,x$$

$$T_B = x$$

Next State Equations:

$$A(t+1) = T_A \oplus A = (B\,x) \oplus A$$

$$B(t+1) = T_B \oplus B = x \oplus B$$

Output Equation:

$$y = A\,B$$

From Next State Equations to State Table

T Flip-Flop Input Equations:

$T_A = B\,x$

$T_B = x$

Next State Equations:

$A(t+1) = (B\,x) \oplus A$

$B(t+1) = x \oplus B$

Output Equation:

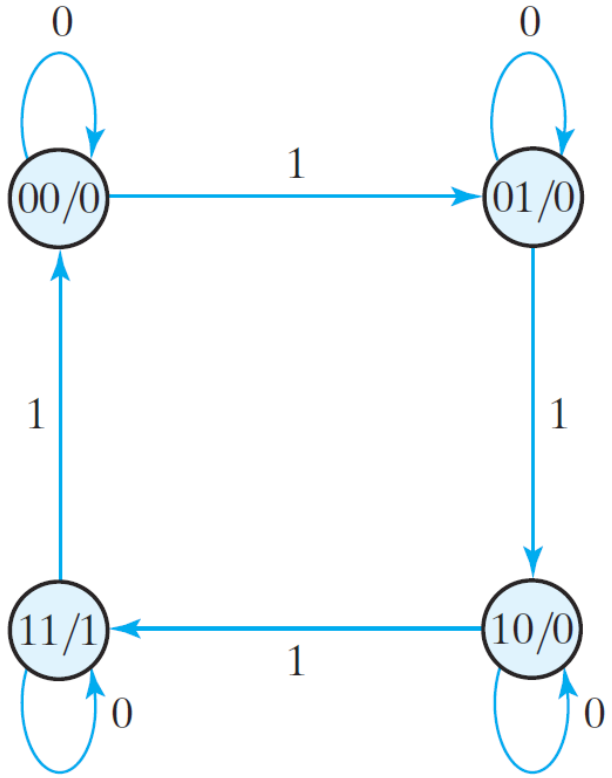
$y = A\,B$

Present State		Input	Next State		Output
A	B	x	A	B	y
0	0	0	0	0	0
0	0	1	0	1	0
0	1	0	0	1	0
0	1	1	1	0	0
1	0	0	1	0	0
1	0	1	1	1	0
1	1	0	1	1	1
1	1	1	0	0	1

Notice that the output is a function of the present state only.
It does **NOT** depend on the input x

From State Table to State Diagram

Present State		Input	Next State		Output
A	*B*	*x*	*A*	*B*	*y*
0	0	0	0	0	0
0	0	1	0	1	0
0	1	0	0	1	0
0	1	1	1	0	0
1	0	0	1	0	0
1	0	1	1	1	0
1	1	0	1	1	1
1	1	1	0	0	1



- Four States: $AB = 00,\ 01,\ 10,\ 11$ (drawn as circles)
- Output Equation: $y = A\,B$ (does not depend on input x)
- Output y is shown inside the state circle (AB/y)

Sequential Circuit with a JK Flip-Flops

One Input x and two state variables: A and B (outputs of Flip-Flops)

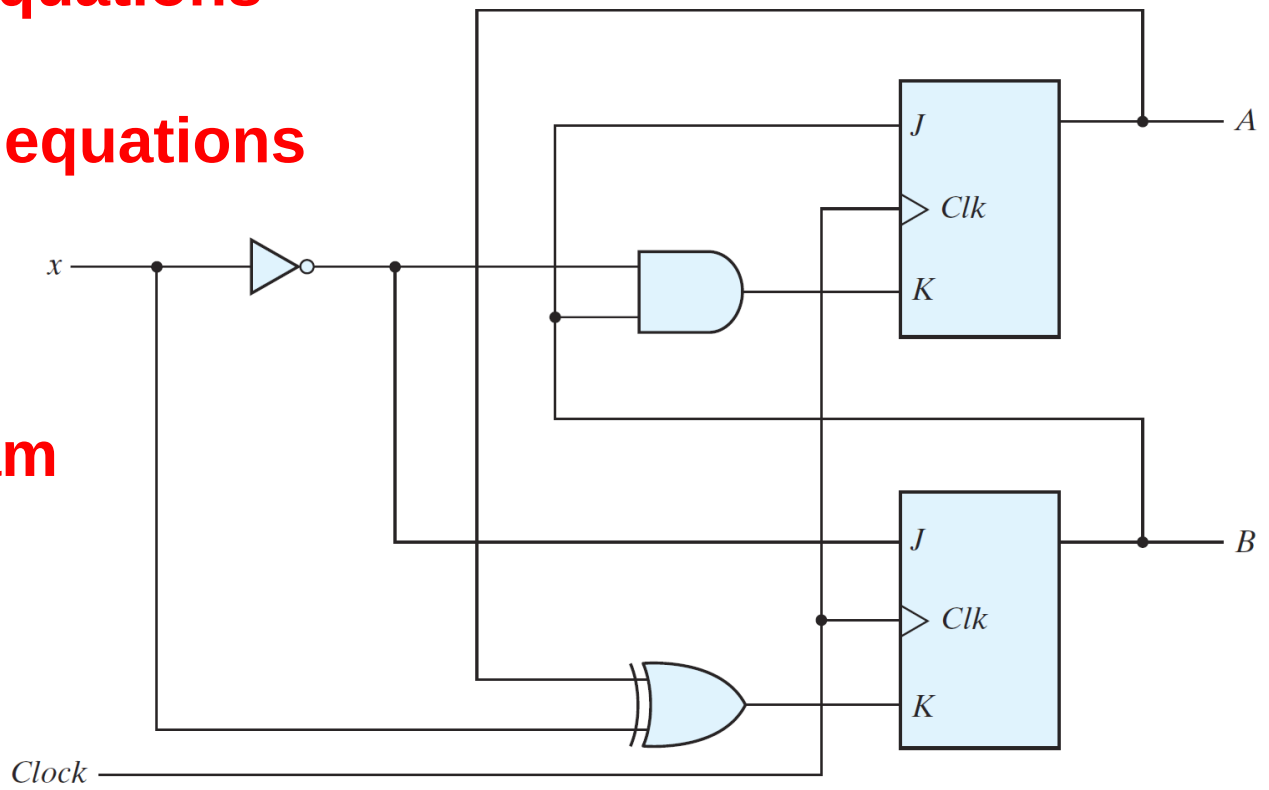
No separate output ➔ Output = Current state $A\ B$

Obtain the JK input equations

Obtain the next state equations

Fill the state table

Draw the state diagram

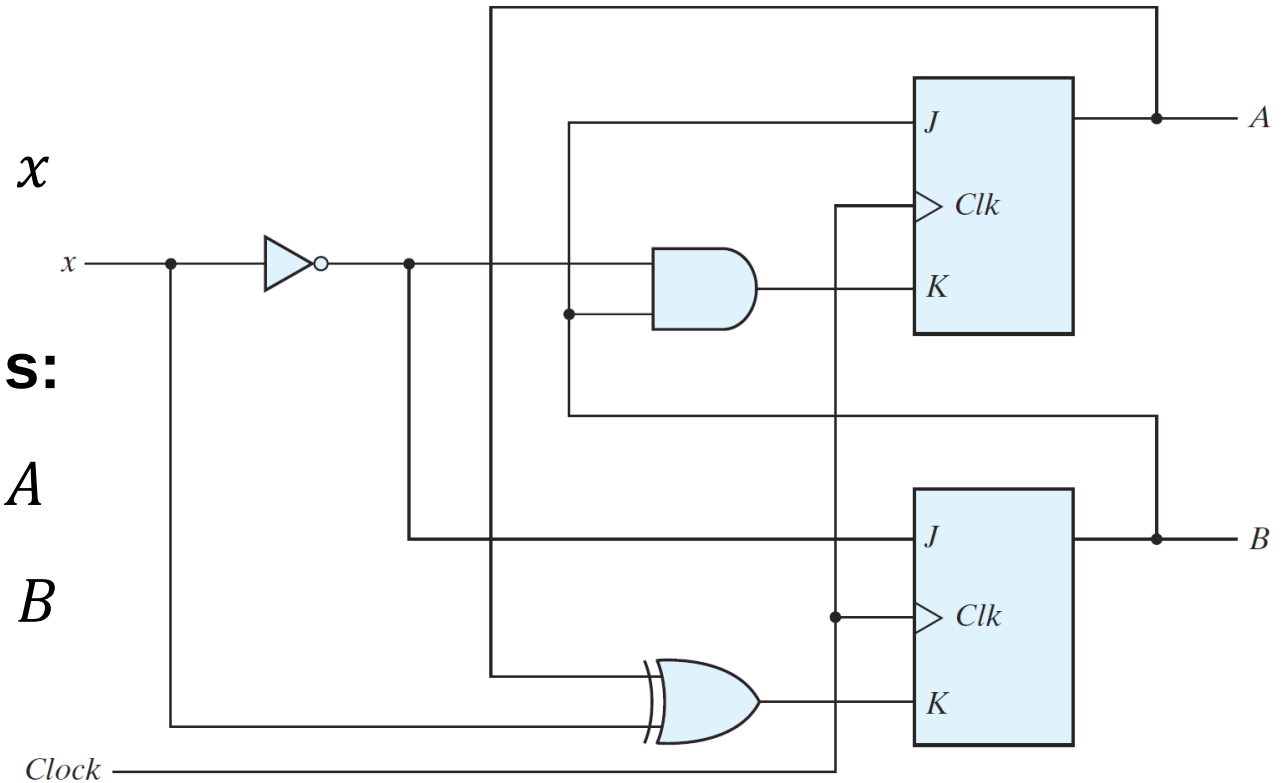


JK Input and Next State Equations

JK Flip-Flop Input Equations:

$J_A = B$ and $K_A = B\,x'$

$J_B = x'$ and $K_B = A \oplus x$



Next State Equations:

$A(t+1) = J_A\,A' + K_A'\,A$

$B(t+1) = J_B\,B' + K_B'\,B$

Substituting:

$A(t+1) = B\,A' + (Bx')'A = A'B + AB' + Ax$

$B(t+1) = x'B' + (A \oplus x)'B = B'x' + A\,B\,x + A'B\,x'$

From JK Input Equations to State Table

JK Input Equations: $J_A = B$, $K_A = B\,x'$, $J_B = x'$ and $K_B = A \oplus x$

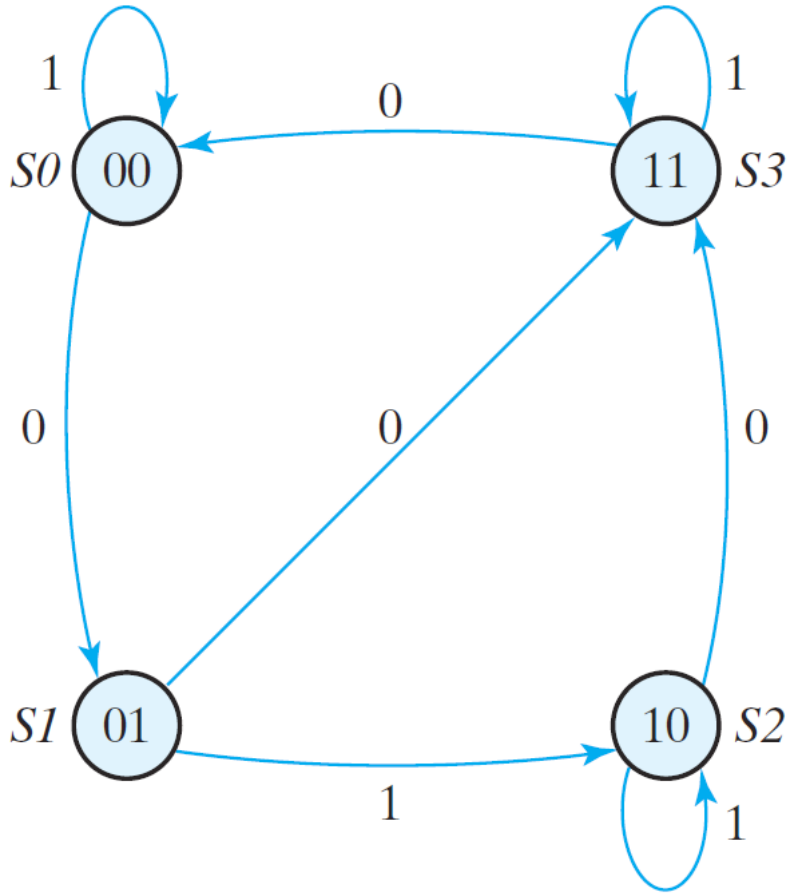
Present State		Input	Next State		Flip-Flop Inputs			
A	*B*	*x*	*A*	*B*	J_A	K_A	J_B	K_B
0	0	0	0	1	0	0	1	0
0	0	1	0	0	0	0	0	1
0	1	0	1	1	1	1	1	0
0	1	1	1	0	1	0	0	1
1	0	0	1	1	0	0	1	1
1	0	1	1	0	0	0	0	0
1	1	0	0	0	1	1	1	1
1	1	1	1	1	1	0	0	0

From State Table to State Diagram

Four states: $A\ B = 00, 01, 10, and\ 11$ (drawn as circles)

Arcs show the input value x on the state transition

Present State		Input	Next State	
A	**B**	**x**	**A**	**B**
0	0	0	0	1
0	0	1	0	0
0	1	0	1	1
0	1	1	1	0
1	0	0	1	1
1	0	1	1	0
1	1	0	0	0
1	1	1	1	1



Summary

- To analyze a clocked sequential circuit:

1. Obtain the equations at the **Inputs** of the flip-flops
2. Obtain the **Next State** equations
   - For a D Flip-Flop, the Next State = D input equation
   - For T and JK, use the characteristic equation of the Flip-Flop
3. Obtain the **Output** equations
4. Fill the **State Table**
   - Put all the combinations of current state and input
   - Fill the next state and output columns
5. Draw the **State Diagram**

Thank You
